

SWITCH GLOW IN THE DARK BOWLING PINS

CARE AND MAINTENANCE

PIN MAINTENANCE

- Clean twice per year.
- Use non-solvent cleaners.
- Use Switch Bowling-approved pin cleaner, specially formulated for glow-in-the-dark pins.
- Clean using soft bristle brushes or cloth only – avoid abrasive materials.
- Do not allow water to soak into the wood base; this may cause premature breakage.
- Do not apply lane conditioners or oils to pins, as this can damage the glow coating and reduce visibility.

STORAGE

- Store in a cool, dry area between 60°–70°F (15°–21°C).
- Maintain relative humidity between 40–60%.
- Keep pins away from heat sources such as radiators, heat pipes, or air ducts.
- Do not store directly against cement or block walls.
- Use storage boxes with a plastic bag liner to protect against moisture.
- Place boxes on skids to keep them off cement floors.

BREAK-IN PERIOD

- Switch Glow in the Dark Pins are built with high-quality, durable materials and require a short break-in period.
- During this time, small surface marks may appear in high-impact areas.
- These marks will fade as the material adjusts, ensuring long-term durability and consistent glow performance.

ABOUT SWITCH BOWLING

- Switch Bowling delivers premium-quality bowling equipment that blends innovation and durability.
- Our Glow in the Dark Bowling Pins provide an exceptional glow effect without compromising playability or performance.
